# Pull Compensation

- **For Letters** ~ allows you to make letters bold so that they will stitch better on towels and other fabrics with a nap or just stand out more [examples pictured below]. Notice the 2nd monogram is much more bold because the pull compensation has been increased.

- **For Designs with fill stitches** ~ allows you to make regular designs "more bold" to account for the "pull" of the thread on the fabric. This isn't needed too much if your item is stabilized well because the stabilizer doesn't allow your fabric to "pull" much. But, this feature is helpful when you're having troubles with the outline being too far away from the fill stitch [better stabilizer will help as well]. The "bold" is applied to the direction of the stitches [they are running left to right in the picture below]. Notice how much farther the stitches are extended past the outline stitch in the second picture.

Easily use *SewWhat-Pro* or *Embird* to adjust compensation on your next project!
